SCHOLARSHIP PORTAL FOR COLLEGE STUDENTS

ABSTRACT

This project proposes the development of a web-based Scholarship Portal aimed at streamlining the scholarship application and disbursement process. The portal will showcase various types of scholarships available, allowing students to search and filter scholarships based on their eligibility criteria. Additionally, the portal will send notifications to students who are eligible for specific scholarships, ensuring they stay informed and up-to-date about available opportunities. The portal will provide features such as student registration, scholarship listing, online application, administrator dashboard, and etc. This project proposes the development of a web-based Scholarship Portal aimed at streamlining the scholarship application and disbursement process, a core area of education, scholarship management, and web development. The current manual process is time-consuming, prone to errors, and poses difficulties for students in finding and applying for relevant scholarships. To address this problem, this project proposes a web-based portal that connects students, administrators and sending notifications to students who are eligible for specific scholarships. The solution aims to improve efficiency, transparency, and accessibility, with future scope for expansion to include mobile app development, showcasing various types of scholarships available, allowing students to search and filter scholarships.

SOFTWARE REQUIREMENTS

- Front End   : Python
- Back End   : MySQL SERVER
